# MORTAL KOMBAT II

# Insert Coin(s)

In a two player game, the loser pays and the winner stays.

Press the Punch and Kick buttons to attack an opponent.

Use the joystick to make the screen player jump or duck, and move left or right.

Use joystick and button combinations to discover secret moves.

MIDWAY Manufacturing Company reserves the rights to make modifications and improvements to its products. The specifications and parts identified in this manual are subject to change without notice.

Operation

## **Safety Notices**

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page before preparing your game for play.

**AC POWER CONNECTION.** Before connecting the game to the AC power source, verify that the "line voltage selection chart" jumper wires are installed correctly for the line voltage in your area. For details, refer to Section 3.

**PROPERLY GROUND THE GAME.** To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. MIDWAY games should only be plugged into a grounded 3-wire outlet. Shocks will also result, if the control panel is not properly grounded! After servicing any parts on the panel, assure that the ground wires are secure. Only then should you lock up the game.

**DISCONNECT POWER DURING REPAIRS.** To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game.

**USE THE PROPER FUSE.** To avoid electrical shock, use the replacement fuse which is specified in the parts list for this game. The replacement fuse must match the original fuse in fuse type, voltage rating, and current rating.

MONITOR PRECAUTIONS. When removing or repairing the monitor, extra precautions must be taken to avoid electrical shock because high voltages may exist within the monitor circuitry and cathode ray tube (CRT) even after power has been disconnected. Do not touch internal parts of the monitor with your hands or metal objects! Always discharge the CRT by the following method: Attach one end of a large, well-insulated, 20-kV jumper to ground. Momentarily touch the free end of the grounded jumper to the anode by sliding it under the anode cap. Wait two minutes and discharge the anode again.

**HANDLE FLUORESCENT TUBE AND CRT WITH CARE.** If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

#### **ATTENTION!**

**PROPERLY ATTACH ALL CONNECTORS.** Make sure that the connectors on each printed circuit board (PCB) are properly connected. If they do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

## **Setup Procedure**

#### **INSTALLATION & INSPECTION**

- 1. Remove all items from shipping container and set them aside. Inspect the exterior of the cabinet for any damage.
- 2. The keys are either taped to the coin return slot, or attached to joystick. Unlock and open the coin and cash box doors. Remove the leg levelers and spare parts which are stored in the cash box.
- 3. Remove the rear door of the cabinet. Inspect the interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.
- 4. Tilt or lay the cabinet down. Locate the four threaded holes on the bottom of the cabinet (one in each corner), and install one leg leveler (with its hex nut) in each hole.
- 5. Stand the cabinet upright and make certain that it is in a stable position. Level the cabinet.
- 6. Refer to the game's Cabinet Wiring Diagram (section 3), and check to see that all cable connectors are correctly secured. DO NOT FORCE CONNECTORS. Watch for damaged connectors and avoid making reversed connections.
- 7. Determine the value of your line voltage with a meter. Then, check the power input wires to the main power supply transformer. Be sure they are connected to taps which correspond to your local line voltage value. If necessary, reconnect the power input wires to the transformer in accordance with the Tranformer Chart in section 3.
- 8. Lay the line cord (connected to the Power Chassis) in the slot along the bottom edge of the rear cabinet door. Replace the rear cabinet door. Close and lock the front coin and cash box doors.
- 9. Connect the line cord to a grounded (3-terminal) AC wall outlet.
- 10. Switch On the game, using the On/Off switch located on the upper left rear of the cabinet, to verify proper operation.

## Servicing

#### Servicing the Control Panel

Switch off power to the game and open the coin door. The control panel is held in place by two latches (located inside the cabinet) which provide constant pressure on the strikes. To release the latches, reach through the coin door opening toward the left and right sides of the cabinet. Do not reach straight back through the coin door opening or you could damage the monitor control board. Lift the latch handle and unhook the wire fasteners. Grip the joysticks and carefully tilt the control panel back on its hinge.

To return the control panel to its normal position, carefully lean it forward until it rests on the cabinet. Be careful not to let it slam down onto the cabinet, or to pinch any wires. Always reclasp the latches.

The monitor DOES NOT contain an isolation transformer in its chassis (it is mounted instead in the Power Chassis Assembly located on the floor of the cabinet). When servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM THE LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

While removing the four bolts, firmly support the monitor from the front of the CRT so that it will not slip.

## ■ Removal of Viewing Glass

Switch off power to the game, and open the control panel. Remove the five hex head screws and the black metal strip at the bottom of the viewing glass. Carefully, slide the glass from its side grooves and lift it clear of the cabinet.

#### Removal of Monitor Bezel

Switch off power to the game. Open the control panel and remove the viewing glass. Lift the bezel off of the monitor.

### Monitor Replacement

We recommend that you read the WARNINGS section thoroughly before beginning this procedure.

Switch off power to the game. Remove the viewing glass and the monitor bezel. Completely disconnect the monitor from all of its cabling. Remove the four bolts securing the monitor's mounting flanges to its mounting panel. Pull the monitor carefully from the cabinet front.

#### Removal of the Marquee

Switch off power to the game. Remove the five hex head screws from the black strip on top of the cabinet. Remove the strip and carefully lift the marquee. Store the marquee carefully to prevent damage.

The fluorescent tube is now accessible for replacement. Remove the plastic lamp locks. Grasp the tube, give it a quarter turn, and remove it from its socket. Carefully place a new tube into the socket, and turn to reinstall.

### **WARNING**

Use care in handling. If you drop a fluorescent tube and it breaks, it will implode!

#### Removal of the Fluorescent Light Assembly

Switch off power to the game. Remove the marquee glass. Disconnect the fluorescent light assembly from its power cable. Remove the screws that hold the assembly to the cabinet then lift out the assembly.

#### ■ Removal of the Speakers

Switch off power to the game. Remove the marquee glass. The speakers come out from the front of the cabinet. Be sure to disconnect the cabling and remove the nuts and machine screws before attempting to remove the speakers from their enclosure. Carefully reinstall the seals upon completing any task in the speaker enclosure.

## Volume Control, Begin Test Switch, and Service Credit Switch

Open the coin door. The game's volume control and diagnostic pushbutton switches are located on a small bracket on the door. The volume is controlled by the two center buttons. Depress the Volume Up or the Volume Down button until the desired sound level is reached. The Begin Test switch, on the right, activates the game's menu system. The Service Credit switch, on the left, allows credits to be alloted for service testing without affecting the game's bookkeeping total.

#### **Game Features**

#### STARTING UP

Switch on power to the game. A "rug" pattern appears on the CRT screen. When the "rug" pattern ends, the screen shows CHECK-ING SCRATCH RAMS, and then CHECKING ROMS. The next screen shows MORTAL KOMBAT II REVISION LEVEL, CMOS TEST OK and the COIN SETTING. The game then begins the Attract Mode.

Insert the desired amount of coins, bills or tokens. Press the appropriate Start button. Use the joysticks to select an on-screen player. Use a control panel button to lock in the selection. The game starts automatically.

### **Note**

When an error is detected during Startup Tests, game start-up does not progress, and an error message appears on the screen.

Note

Discover secret moves by using

joystick and button combinations.

## **Player Controls**

#### Start Buttons

Each player has a Start button which allows him/her to begin or continue play.

### High Kick/High Punch Buttons

Allows the on-screen player to kick or punch an opponent in the upper body.

#### Low Kick/Low Punch Buttons

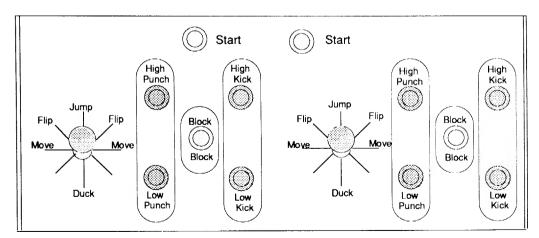

Allows the on-screen player to kick or punch an opponent in the lower body.

#### Block Buttons

Allows the on-screen player to block an opponent's punch, kick or special move.

#### Joystick

Allows the on-screen player to move, flip, jump and duck.

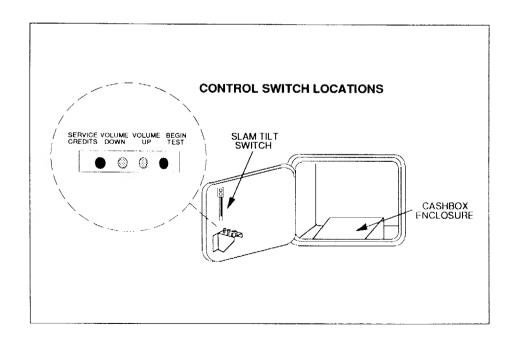

**Control Panel** 

# **Game Operation**

The **MORTAL KOMBAT II** Control Switches are located inside the coin door.

#### **Control Switches**

- The **Slam Tilt switch** detects any forceful vibrations against the coin door. This eliminates pounding for free games.
- The Volume Down and Volume Up switches increase or decrease the volume level of the music and speech. For greater profits, set your game's volume level at a nice loud setting.
- The **Begin Test switch** allows you to activate the game's menu system. Press the Begin Test switch to access the Main Menu. To exit the menu system, select EXIT TO GAME OVER from the Main Menu, then press any control panel button.
- The **Service Credit switch** is a special feature switch that allots credit without affecting the game's bookkeeping total.

# **Menu System Operation**

#### **OPERATION**

All MORTAL KOMBAT II Game Audits, Adjustments, and Diagnostics are options of the Main Menu. Each option in turn, has its own menu, listing several choices that you may act upon as desired.

Press the Begin Test switch on the coin door or close Switch #8 of DIP Switch Bank #2, to activate the Main Menu (shown below). Game adjustments, bookkeeping, and diagnostics are all accessible from this menu.

Move any joystick up or down to cycle through the menu options. Notice that the options are highlighted in sequence. Press any button to activate a highlighted option.

Note: Only highlighted options can be activated.

**CPU BOARD TEST** 

**SOUND BOARD TEST** 

**MONITOR PATTERNS** 

**BURN-IN TEST** 

**RETURN TO MAIN MENU** 

**DIAGNOSTIC MENU** 

#### **Switch Test**

The Switch Test allows the operator to test the switches on the control panel and the coin door.

Select the Switch Test by using any joystick to highlight the Switch Test option, then press any control panel button to activate the option.

During the Switch Test, the top of the screen shows the locations of the control panel switches. The bottom of the screen shows the locations of the coin door switches. Press a control panel switch and the switch location, on the top of the screen, lights. Press a coin door switch and the switch location, on the bottom of the screen, lights. Release the switch and the screen returns to normal.

Press the Start buttons together to return to the Diagnostic Menu.

#### **DIP Switch Test**

The DIP Switch Test allows the operator to check the position of the two DIP Switches on the CPU Board. The operator can also change the setting of each position of each DIP Switch during this mode.

Use any joystick to select the DIP Switch Test and any control panel button to activate it. The screen displays their current settings.

To change a DIP Switch setting, press the switch to the desired setting, then check the screen to verify that the switch now shows the new setting.

Press any control panel button to return to the Diagnostic Menu.

#### **CPU Board Test**

The CPU Board Test (much like the Start-up Test) allows the operator to check the RAMs and ROMs.

Select the CPU Board Test with any joystick, then press any control panel button to activate the automatic test of the CPU Board's RAMs and ROMs.

When this test is activated a "rug" pattern appears on the screen. The screen then changes to show the layout of the RAMs and ROMs. A ROM or RAM location that is shown as black with a white outline is used and should turn either red or green. A ROM or RAM location that is shown as gray with a white outline is not used in this game. During the test ROMs or RAMs are good if they turn green and they are faulty if they turn red.

The CPU Test pauses when a bad ROM or RAM is detected. Press any button to continue the test.

#### **Sound Board Test**

This test allows listening to some of the sounds that this game is capable of producing.

Select the Sound Board Test with any joystick, then press any control panel button to activate it. The screen displays two test options.

GENERAL TEST analyzes the sound circuitry. The screen shows a list of error codes. A successful test causes a single "tone" to sound. Detection of a fault causes a series of tones or no tone at all to sound.

**PLAY SOUNDS** tests synthesized & digitized sounds from the Sound Board. Advance to the next sound by pressing any action button. Press either Start button to repeat a sound.

Select RETURN TO MAIN MENU or BACK TO DIAGNOSTIC MENU. Press any control panel button to activate your selection.

**GENERAL TEST** 

**PLAY SOUNDS** 

**BACK TO DIAGNOSTIC MENU** 

**RETURN TO MAIN MENU** 

**SOUND TEST MENU** 

#### **Monitor Patterns**

The Monitor Patterns Test provides a menu for testing the monitor.

Select the test with any joystick and activate with any control panel button. Once in the Monitor Patterns Test, move any joystick to select a test option and press any control panel button to activate it. Press any control panel button again to return to the Monitor Patterns Test menu.

# SELECT WITH ANY STICK ACTIVATE WITH ANY BUTTON

**RED SCREEN** 

**GREEN SCREEN** 

**BLUE SCREEN** 

**COLOR BARS** 

**CROSSHATCH PATTERNS** 

**BACK TO DIAGNOSTIC MENU** 

**RETURN TO MAIN MENU** 

#### MONITOR PATTERN MENU

The RED, GREEN and BLUE SCREEN tests fill the screen with either red, green or blue.

The **COLOR BARS** test fills the screen with several shades of colors to help with red, green and blue level adjustments. Each color should appear sharp and clear.

The CROSSHATCH PATTERNS test fills the screen with a grid and a series of dots. The grid and the dots should be clear. The dots should appear round.

If any of the Monitor Pattern Tests shows a need for adjustment use the proper white knobs on the Monitor Board.

Use any joystick to select RETURN TO MAIN MENU or BACK TO DIAGNOSTIC MENU and activate with any control panel button.

#### **Burn-in Test**

The Burn-in Test continually repeats the CPU Board Test. Move any joystick to select the Burn-in Test, then press any control panel button to activate the test. When the Burn-in Test detects an error, the test stops and displays an error message on the screen. The second page of the Audit Table specifies the number of Burn-in cycles successfully completed. Use this test to find intermittent CPU problems.

To exit this test switch the game Off then On again.

#### **COIN BOOKKEEPING**

To enter the Coin Bookkeeping from the Main Menu, move any joystick to select the Coin Bookkeeping option, then press any control panel button to activate it.

The Coin Bookkeeping Table records the coinbox totals and game play counters. The left side of the table names the bookkeeping item and the right side shows the number of coins, credits, or plays for each item.

To exit Coin Bookkeeping, move any joystick to select RETURN TO MAIN MENU, then press any control panel button to activate it.

To exit the Game Audit Table, move any joystick to select RETURN TO MAIN MENU, then press any control panel button to activate your selection.

#### **GAME ADJUSTMENTS**

Move any joystick to select the Game Adjustment option on the Main Menu, then press any control panel button to activate it.

The Game Adjustments Menu allows the owner/operator to change the Game Pricing and Game Difficulty.

The Game Adjustments Menu offers several options. Each option has several choices. Move any joystick to select an option, then press any control panel button to activate that option. The next menu screen provides a setting choice. Move any joystick to modify the setting value, then press any control panel button to lock in the new value and return to the Adjustment Menu. Move the joystick up to increase the setting value, move the joystick down decrease the setting value.

To exit the Adjustments Menu, use any joystick to select RETURN TO MAIN MENU, then use any control panel button to activate your selection.

**WINNING STREAK RESET** 

**RETURN TO MAIN MENU** 

**GAME ADJUSTMENT MENU** 

## **Note**

Game Adjustments are explained in more detail on the following page.

Adjustment values set by DIP Switch, override adjustment values set by the menu system.

#### **Game Adjustments**

#### **Standard Pricing**

Standard Pricing allows the operator to choose any of the "Standard" selections for the Standard Pricing Table. See page 1-19.

Modify the setting value with any joystick. Press any control panel button to lock in the new value and return to the Adjustment Menu.

#### **Custom Pricing**

Custom Pricing allows the operator to install pricing other than that of the Standard Pricing Table. Custom Pricing also allows the operator to select the maximum amount of credits per game, the amount of credits required to start a game, and the amount or credits required to continue a game. This option is being adjusted from the Dip Switch Settings. In order to use custom pricing, switch #1 of DIP Switch Bank #2 must be set to on. See page 1-20.

Modify the setting value with any joystick. Press any control panel button to lock in a new value and return to the Adjustment Menu.

#### Free Play

This option selects free play. The setting choices for this adjustment are:

- No (factory)
- Yes

#### **Computer Difficulty**

This option determines the difficulty level of game play. The setting choices for this adjustment are:

- -1 (Extra Easy)
- -2 (Easy)
- -3 (Medium; factory)
- -4 (Hard)
- -5 (Extra Hard)

#### **Winning Streak Reset**

This option resets the highest scores after a selected amount of games are played. The setting choices for this adjustment are:

- Reset every 5,000 games.
- Reset every 10, 000 games (factory).
- Reset every 15, 000 games.
- Do Not Reset.

- (8) This is the limit for the credits counter. Additional coins inserted will be lost (factory setting: 30).

#### **UTILITIES**

Move any joystick to select the Utilities option on the Main Menu, then press any control panel button to activate it.

The Utilities Menu allows the owner/operator to clear the game's bookkeeping memory and to install a custom message.

# SELECT WITH ANY STICK ACTIVATE WITH ANY BUTTON

**CLEAR CREDITS** 

**CLEAR COIN COUNTERS** 

**CLEAR GAME AUDITS** 

**RESET HIGH SCORE** 

**DEFAULT ADJUSTMENTS** 

**FULL FACTORY RESTORE** 

RETURN TO MAIN MENU

#### **UTILITIES MENU**

Move any joystick to select an item from the Utilities Menu, then press any control panel button to activate that item. After an item has been activated, you are given the option of resetting it or not.

For example:

# CLEAR COIN COUNTERS? ARE YOU SURE?

YES NO

Move any joystick to choose YES or NO, then press any control panel button to lock in your choice and to return to the Utilities Menu.

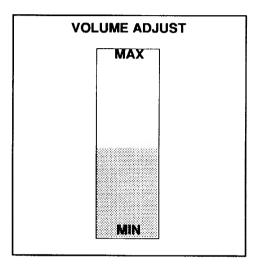

To exit the Utilities Menu, move any joystick to select RETURN TO MAIN MENU, then press any control panel button to activate your selection.

### **VOLUME ADJUST**

Move any joystick to select the Volume Adjust option on the Main Menu, then press any control panel button to activate it.

The Volume Adjust allows the operator to control the audio level of the game.

Use any joystick, or the volume buttons, to adjust the volume to the desired level. The scale on the screen shows the volume level.

Press any button to return to the Main Menu.

# **Troubleshooting**

#### **Problem**

#### **Possible Solution**

No Picture or Distorted Picture.

Check for faulty video board or monitor. Check for disconnected video signal cable.

Turn game On and nothing happens.

Check line fuse. Check for +5Vdc at pins C, D, 3, and 4 of the JAMMA Connector.

No sound.

Check the speaker and speaker connection to pins L and 10 on the JAMMA Connector. Check volume control setting. Check for +12V dc at pins F and 6 on the JAMMA Connector. Check interboard wiring from CPU Board to the Sound Board. Also, check for -5V.

No General Illumination.

Check the 1A., S.B. fuse.

Move joystick and the screen player does not move.

Check for open wires between the joystick and CPU Board. Check for contamination on joystick switch contacts and CPU Board pins. Check for proper ground.

Press Start Button and nothing happens.

Check for open wires between the button and CPU Board. Check for contamination on CPU Board pins or the button switch blade contacts. Check for proper ground.

Press any control panel button and screen player does not move.

Check for open wires between the button and CPU Board. Check for contamination on CPU Board pins or the button switch blade contacts. Check for proper ground.

No credit given when coins are inserted.

Check DIP switch coin setting. Check for contamination on coin switch contacts. Check for an open wire between Coin Switch 1 and pin 16 on the JAMMA Connector or Coin Switch 2 and pin T of the JAMMA Connector.

Too many credits for number of coins inserted.

Check Game Pricing setting. Check for a short between pins T & 16 on the JAMMA Connector.

Game stays in test mode.

Check that the test switch on the DIP Switch is set to Off.

### **WARNINGS & NOTICES**

Warning

USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.

\* For safety and reliability, substitute parts and modifications are not recommended.

\* Substitute parts or modifications may void FCC type acceptance.

\* This game is protected by federal copyright, trademark and patent laws. Unauthorized modifications may be illegal under Federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

Warning

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generated, uses and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Warning

Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

### Notice

When MIDWAY ships a game, it is in compliance with FCC regulations. Your sticker is proof. If the sticker is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does not contain an FCC sticker, call MIDWAY immediately.
